ViewMaster M Extension 043

The extensions serve not only as an extender, they also add a pivoting point. Normally, when a monitor is raised or lowered, the viewing depth would change as well. This can be corrected by fitting extensions which will create independent depth adjustability for the monitor user. This will result in an ergonomically better workspace through improved efficacy.

- Extension lengthens the range of the M2, M4, M5 and M6 Monitor support
- Enables independent depth adjustment
- Integrated/concealed cable management
- Die-cast aluminium
